

SPECIFICATION AMENDMENTS:

Please replace the paragraph [0023] on page 9 with the following amended paragraph:

The resolver 21 includes the annular stationary portion 28 which is positioned radially and circumferentially and fixed to the end cover 23 of the motor housing 18, and an annular movable portion 29 co-rotatable with the rotor 20. The resolver 21 is, for example, of a ~~reluctance~~ inductance type, and is capable of detecting the rotation angle of the movable portion 29 with respect to the stationary portion 28. The stationary portion 28 includes a plurality of cores 28a fixed to the end cover 23, and coils 28b respectively wound around the cores 28a. The plurality of cores 28a are annularly arranged around the movable portion 29. A magnetization circuit is provided by the movable portion 29 and the stationary portion 28.
